# SAFETY INSTRUCTIONS, LEGAL REQUIREMENTS, WARRANTY, RETURN POLICY

### SAFETY INSTRUCTIONS, LEGAL REQUIREMENTS, WARRANTY, RETURN POLICY

### 1.1 Symbols

Danger

This symbol represents an immediate hazardous situation which could result in serious injury, death or damage to the equipment. Where this symbol is shown, do not use the equipment further unless you have fully understood the nature of the hazard and have taken the required precautions.

Attention

This symbol indicates important instructions which should be respected in order to avoid damaging or destroying the equipment. Follow the precautions given in these instructions to avoid the hazard. Call our service team if necessary.

Call service

Where this symbol is shown call our service team for advice if necessary.

Note

This symbol indicates a note or detailed setup tip.

**ESC** Operator key

Operator keys are printed in bold typeface.

### Safety instructions

- Do not install, operate or maintain this flowmeter without reading, understanding and following these operating instructions, otherwise injury or damage may result.
- Study these operating instructions carefully before the installation of the equipment and keep them for future reference.
- Observe all warnings, notes and instructions as marked on the packaging, on the equipment, and detailed in the operating instructions.
- Follow the unpacking, storage and preservation instructions to avoid damage to the equipment.
- Install the equipment and cabling securely and safely according to the relevant regulations.
- If the product does not operate normally, please refer to the service and troubleshooting instructions, or contact Katronic for help.

### 1.3 Warranty

- Any product purchased from Katronic is warranted in accordance with the relevant product documentation and as specified in the sales contract provided. This is subject to the condition that it has been used for the purpose for which it has been designed and operated as outlined in these operating instructions. Misuse of the equipment will immediately revoke any warranty given or implied.
- Responsibility for suitability and intended use of this ultrasonic flowmeter rests solely with the user. Improper installation and operation of the flowmeter may lead to a loss of warranty.
- Please note that there are no operator-serviceable parts inside the equipment. Any unauthorised interference with the product will invalidate the warranty.

### 1.4 Return policy

If the flowmeter has been diagnosed to have a problem, it can be returned to Katronic for repair using the Customer Return Note (CRN) attached to the Appendix of this manual. Katronic regret that for health and safety reasons we cannot accept the return of the equipment unless accompanied by the completed CRN.

### 1.5 Legislative requirements

The flowmeter is designed to meet the safety requirements in accordance with sound engineering practice. It has been tested and has left the factory in a condition in which it is safe to operate. The equipment is in conformity with the statutory requirements of the EC directive and complies with applicable regulations and standards for electrical safety EN 61010 and electromagnetic compatibility EN 61326. A CE Declaration of Conformity has been issued in that respect, a copy of which can be found in the Appendix of these operating instructions.

The Waste Electrical and Electronic Equipment Directive (WEEE Directive 2012/19/EU) aims to minimise the impact of electrical and electronic goods on the environment by increasing re-use and recycling and by reducing the amount of WEEE going to landfill. It seeks to achieve this by making producers responsible for financing the collection, treatment, and recovery of waste electrical equipment, and by obliging distributors to allow consumers to return their waste equipment free of charge. Katronic offers its customers the possibility of returning unused and obsolete equipment for correct disposal and recycling. The dustbin symbol indicates that when the last user wishes to discard this product, it must be sent to appropriate facilities for recovery and recycling. By not discarding this product along with other household-type waste, the volume of waste sent to incinerators or landfills will be reduced and natural resources will be conserved. Please use the Customer Return Note (CRN) in the Appendix for return to Katronic.

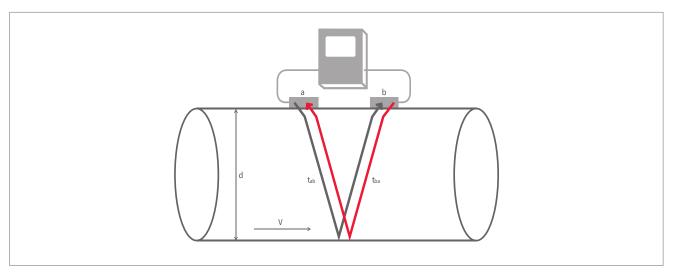

All products manufactured by Katronic are compliant with the relevant aspects of the RoHS Directive.

### INTRODUCTION

### 2 INTRODUCTION

### 2.1 Clamp-on transit-time flowmeter

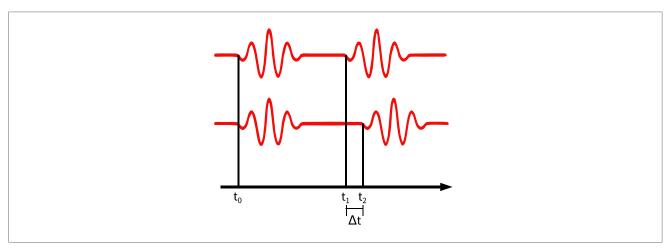

The KATflow 150 is an ultrasonic flowmeter employing clamp-on sensors for the measurement of liquids in full, enclosed pipes. Flow measurements can be undertaken without interruption of the process or interference with the integrity of the pipeline. The clamp-on sensors are attached to the outside of the pipes. The KATflow 150 uses ultrasonic signals for measurement of the flow, employing the transit-time method.

Picture 1: Clamp-on ultrasonic flowmeter configuration

### 2.2 Measuring principle

Ultrasonic signals are emitted by a transducer installed on a pipe and received by a second transducer. These signals are emitted alternately in the direction of flow and against it. Because the medium is flowing, the transit time of the sound signals propagating in the direction of flow is shorter than the transit time of the signal propagating against the direction of flow. The transit-time difference  $\Delta t$  is measured and allows the determination of the average flow velocity along the path of acoustic propagation. A profile correction is then performed to obtain the average flow velocity over the cross-sectional area of the pipe, which is proportional to the volumetric flow rate.

Picture 2: Transit-time measuring principle

### 3 INSTALLATION

### 3.1 Unpacking and storage

### 3.1.1 Unpacking

Care should be taken when opening the box containing the flowmeter, any markings or warnings shown on the packaging should be observed prior to opening. The following steps should then be taken:

- Unpack the flowmeter in a dry area.
- The flowmeter should be handled with care and not left in an area where it could be subject to physical shocks.
- If using a knife to remove packaging care should be taken not to damage the flowmeter or cables.
- The flowmeter package and contents should be checked against the delivery note supplied and any missing items reported immediately.
- The flowmeter package and contents should be checked for signs of damage during transport and any problems reported immediately.
- The vendor accepts no responsibility for damage or injury caused during the unpacking of the instrumentation supplied.
- Excess packing materials should be either recycled or disposed of in a suitable way.

### 3.1.2 Storage

If storage is necessary, the flowmeter and sensors should be stored:

- in a secure location,
- away from water and harsh environmental conditions,
- in such a way as to avoid damage,
- small items should be kept together in the bags and small plastic boxes provided to avoid loss.

### 3.1.3 Identification of components

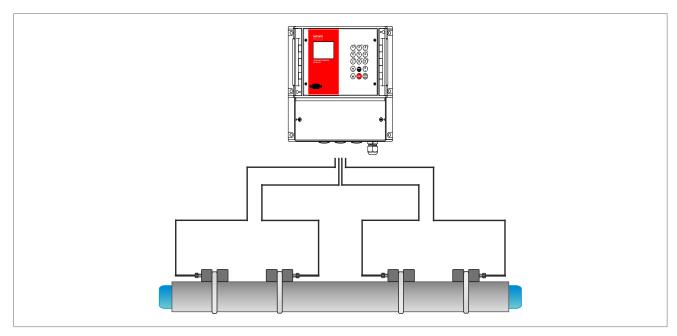

The following items are typically supplied (please refer to your delivery note for a detailed description):

- KATflow 150 ultrasonic flowmeter,
- Clamp-on sensors (one pair for single-channel operation, two pairs for dual-channel operation),
- Sensor connection cable(s) if not direct sensor connection,
- · Sensor mounting accessories,
- Coupling component,
- Measuring tape,
- Operating instructions,
- Calibration certificate(s) (optional),
- Temperature measurement probe(s) (optional).

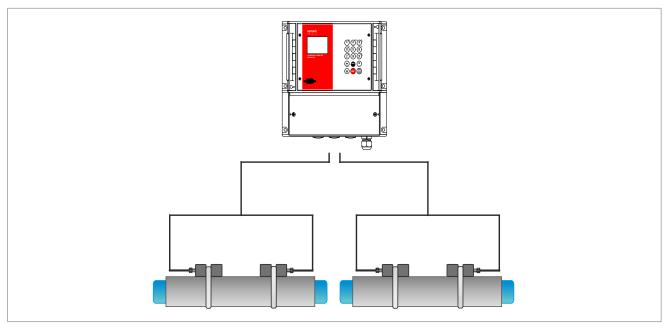

# INSTALLATION

### 3.2 System configuration

A maximum of two sensor pairs can be installed. If two pairs are installed these can be configured either in a one-pipe dual-path (Picture 3) or a two-pipe single-path (Picture 4) configuration.

Picture 3: KATflow 150 with direct sensor connection in a 1-pipe 2-path configuration

Picture 4: KATflow 150 in a 2-pipe 1-path configuration

### 3.3 Clamp-on sensor installation

The correct selection of the sensor location is crucial for achieving reliable measurements and high accuracy. Measurement must take place on a pipe in which sound can propagate (see Section 3.3.1 Acoustic propagation) and in which a rotationally symmetrical flow profile is fully developed (see Section 3.3.2 Straight pipe lengths).

The correct positioning of the transducers is an essential condition for error-free measurements. It ensures that the sound signal will be received under optimal conditions and evaluated correctly. Because of the variety of applications and the different factors influencing the measurement, there can be no standard solution for the positioning of the transducers.

The correct position of the transducers will be influenced by the following factors:

- diameter, material, lining, wall thickness and general condition of the pipe,
- the medium flowing in the pipe,
- the presence of gas bubbles and solid particles in the medium.

After the sensor location has been selected, make sure that the supplied cable is long enough to reach the flowmeter mounting location.

Check that the temperature at the selected location is within the operating temperature range of the transducers (see Chapter 9).

### 3.3.1 Acoustic propagation

Acoustic propagation is achieved when the flowmeter is able to receive sufficient signal from the transmitted ultrasonic pulses. The signals are attenuated in the pipe material, the medium and at each of the interfaces and reflections. External and internal pipe corrosion, solid particles and gas content in the medium contribute heavily to signal attenuation.

### 3.3.2 Straight pipe lengths

Sufficient straight lengths of pipe on the inlet and outlet of the measuring location ensure an axi-symmetrical flow profile in the pipe, which is required for good measurement accuracy. If insufficient straight lengths of pipe are available for your application measurements are still obtainable, but the certainty of the measurement can be reduced.

### **INSTALLATION**

### 3.4 Installation location

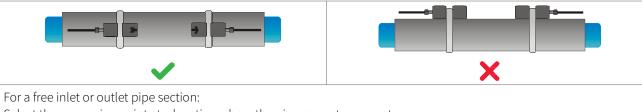

Select an installation location following the recommendations in Table 1 and try to avoid measuring:

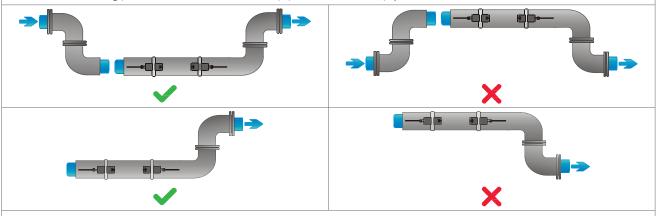

- in the vicinity of deformations and defects of the pipe,
- near welding seams,
- where deposits could be building up in the pipe.

### For a horizontal pipe:

Select a location where the transducers can be mounted on the side of the pipe, so that the sound waves emitted by the transducers propagate horizontally in the pipe. In this way, the solid particles deposited on the bottom of the pipe and the gas pockets developing at the top will not influence the propagation of the signal.

Select the measuring point at a location where the pipe cannot run empty.

For a vertical pipe:

Select the measuring point at a location where the liquid flows upward to ensure that the pipe is completely filled.

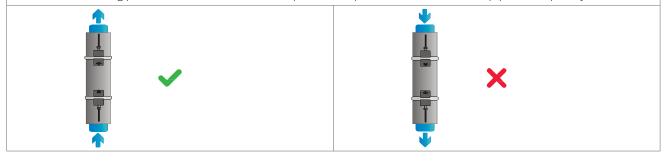

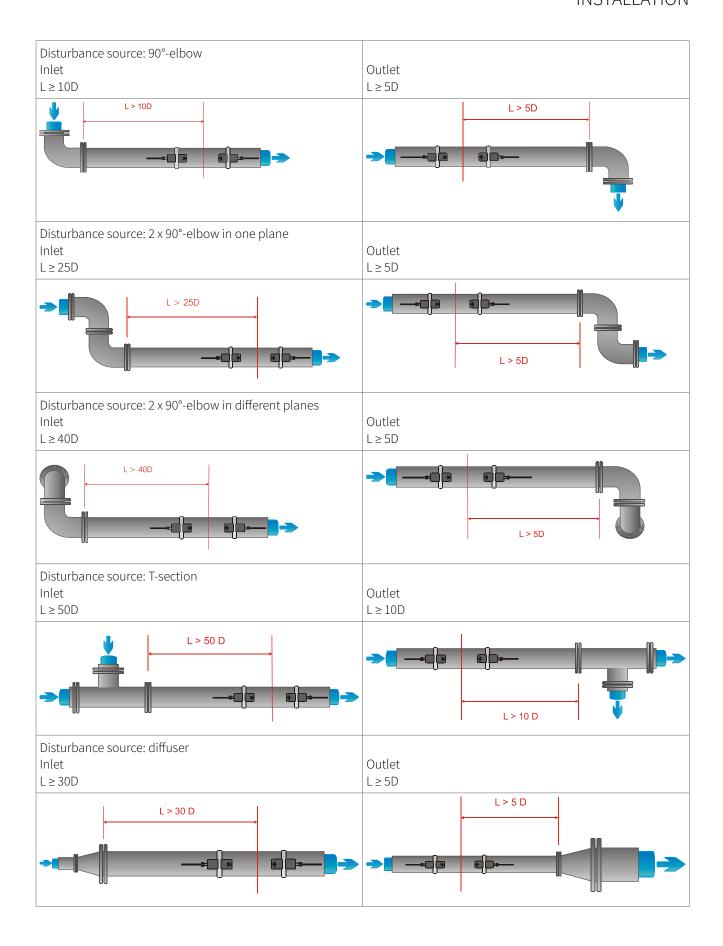

Table 1: Recommendations for sensor mounting location

Look for a sensor installation location with sufficient straight pipe to obtain accurate measurements. Please refer to Table 2 as a guideline for recommended distances from disturbance sources.

# INSTALLATION

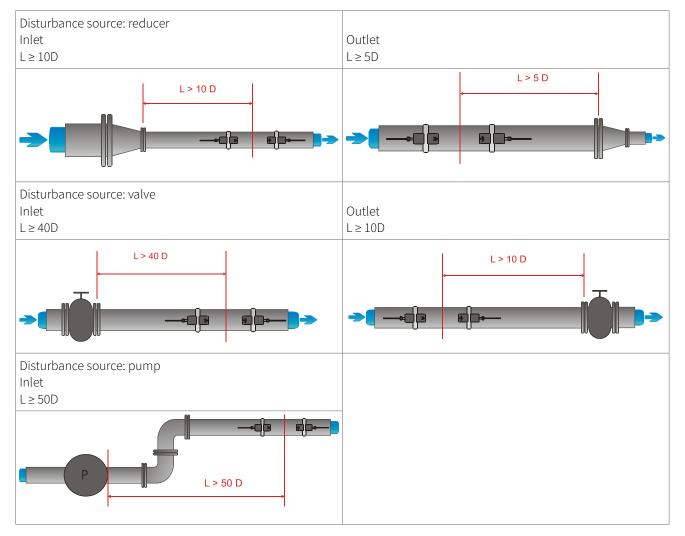

Table 2: Recommended distances from disturbance sources

### 3.5 Pipe preparation

• Clean dirt and dust from around the area of the pipework where the sensors are to be placed.

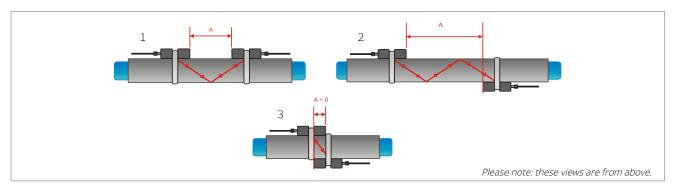

- Remove loose paint and rust with a wire brush or file.
- Firmly bonded paint does not necessarily need to be removed provided the flowmeter diagnostics indicate sufficient signal strength.

### 3.6 Sensor mounting configurations and separation distance

### 3.6.1 Reflection Mode

The most common clamp-on sensor mounting configuration is the Reflection Mode, sometimes known as V-Mode (see Picture 5, sketch 1). Here, the ultrasonic signal passes twice through the medium (two signal passes). The Reflection Mode is the most convenient mounting method as the transducer separation distance can be measured easily and the sensors can be accurately aligned. This method should be used whenever possible.

Picture 5: Clamp-on sensor mounting configurations and sensor spacing

### 3.6.2 Diagonal Mode

An alternative mounting configuration (see Picture 5, sketch 3) is the Diagonal Mode (Z-Mode). The signals travel only once through the pipe. This method is often used for larger pipes where greater signal attenuation might occur.

Further variation of the Reflection and the Diagonal Modes are possible by altering the number of passes through the pipe. Any even number of passes will require mounting the sensors on the same side of the pipe, while with an odd number of passes, the sensors must be mounted on opposite sides of the pipe. Commonly, for very small pipes, sensor mounting configurations such as four passes (W-Mode) or three passes (N-Mode) are used (see Picture 5, sketch 2).

### 3.6.3 Transducer separation distance

The transducer separation distance A is measured from the inside edges of the sensor heads as shown (see Picture 5). It is automatically calculated by the flowmeter based on the parameter entries for pipe outside diameter, wall thickness, lining material and thickness, medium, process temperature, the sensor type and the selected number of signal passes.

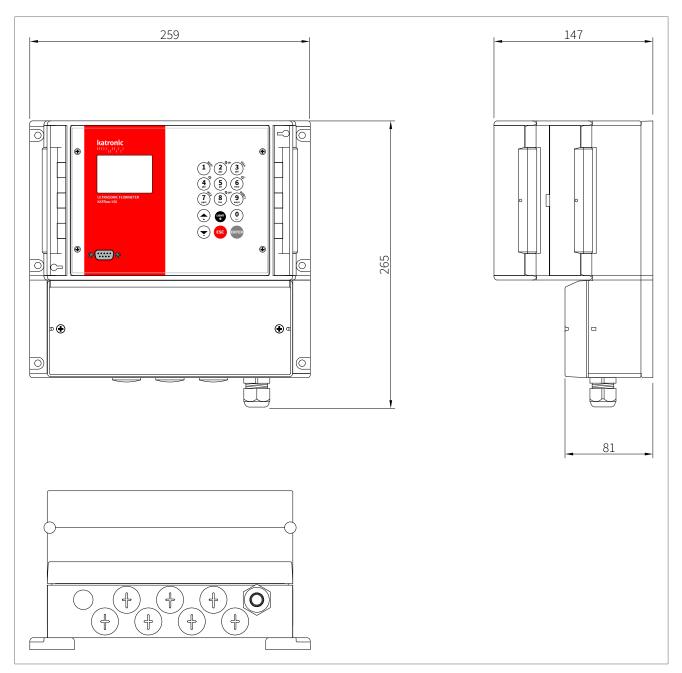

A negative separation distance A < 0 can occur for mounting configurations on small pipes where Diagonal Mode operation has been selected (see Picture 5, sketch 3). Negative separation distances may be suggested for Reflection Mode installations, but are not possible. In these cases, use Diagonal Mode or a larger number of passes.

# INSTALLATION

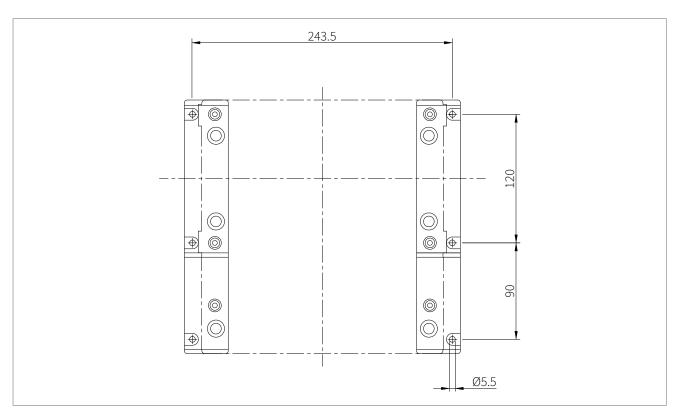

### 3.7 Flowmeter installation

### 3.7.1 Outline dimensions

The KATflow 150 is a wall mounted device and can be installed using suitable screws and wall plugs according to the following drawings (Picture 6 and 7).

Picture 6: Outline dimensions KATflow 150

Picture 7: Drilling aid for wall mounting KATflow 150

Make sure that the ambient temperature is within the -10  $\dots$  +60 °C operating temperature range specified for the flowmeter unit (see Section 9.2).

# INSTALLATION

### 3.7.2 Electrical connections

Please note that in order to supply the unit with mains power, the equipment must be protected by suitably sized switches and circuit breakers.

100 ... 240 V AC, 50/60 Hz 10 W 9 ... 36 V DC 10 W

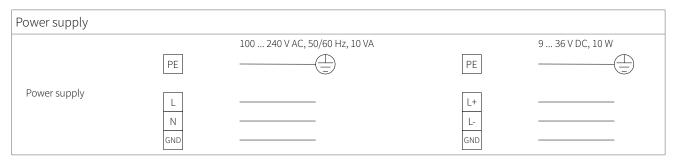

Table 3: Electrical diagram power supply for the KATflow 150 flowmeter

Table 5: Electrical diagram process outputs for the KATflow 150 flowmeter

# INSTALLATION

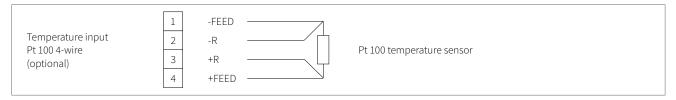

Table 6: Electrical diagram process inputs for the KATflow 150 flowmeter

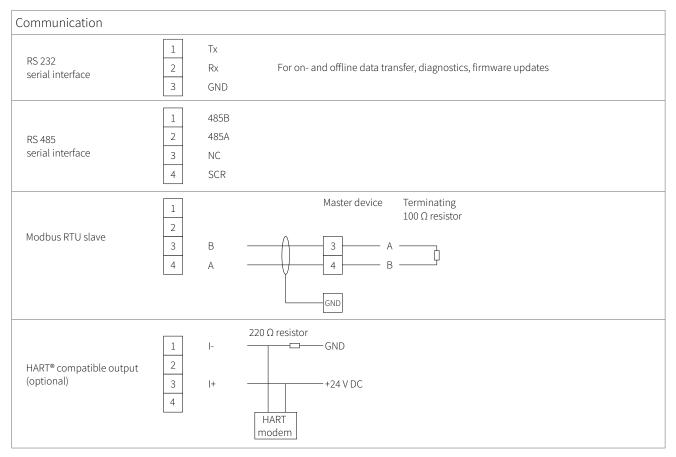

Table 7: Electrical diagram communication options for the KATflow 150 flowmeter

### 3.8 Clamp-on-sensor mounting

Before the sensors can be mounted

- the installation location should have been determined,
- a sensor mounting method should be chosen,
- the flowmeter must be mechanically and electrically installed,
- the sensors must be connected to the flowmeter.

Depending on which sensor mounting method is being used, the clamp-on sensors are either mounted on the same side of the pipe (Reflection Mode) or on opposite sides of the pipe (Diagonal Mode). The sensor spacing is calculated by the flowmeter from the pipe parameters entered (see Section 3.6).

### 3.8.1 Acoustic coupling gel

In order to obtain acoustical contact between the pipe and the sensors, apply a bead of acoustic coupling gel lengthwise down the centre of the contact area of the sensors.

Picture 8: Application of acoustic coupling gel

### **INSTALLATION**

### 3.8.2 Correct positioning of the sensors

Always mount the transducer pair so that the free front edges of the sensors face each other. There is a different engraving on the top of each transducer. The transducers are mounted correctly if the engravings on the two transducers form an arrow. The transducer cables should point in opposite directions. Later, the arrow, in conjunction with the indicated measured value, will help to determine the direction of flow (see Section 3.4).

The sensor separation distance is automatically calculated by the flowmeter based on the parameter entries for pipe outside diameter, wall thickness, lining material and thickness, medium, process temperature, the sensor type and the selected number of signal passes. The sensor positioning screen (see Section 4.3) allows fine adjustment of the sensor location.

Picture 9: Correct positioning of the sensors

### 3.8.3 Sensor mounting with tension straps

- Cut the tension straps to the appropriate length.
- Pull at least 2 cm of the tension strap through the slot in the clamp and bend the strap back to secure the clamp to the tension strap.
- Guide the other end of the tension strap through the groove on top of the sensor.
- Place the sensor onto the prepared pipe section.
- Hold the transducer with one hand and guide the tension strap around the pipe.

- Pull the tension strap and guide the free end through the clamp so that the clamp hooks engage. Slightly tighten the screw on the clamp.
- Mount the second sensor in the same way.
- Press the sensors firmly onto the pipe. There should be no air pockets between the transducer surface and the pipe wall.
- Using a measuring tape, adjust the sensor separation distance as suggested by the flowmeter. When the sensor positioning screen (see Section 4.3) is displayed, the middle bar allows fine adjustment of the sensor location.
- Ensure that the narrower side of the clip is above and inside the wider side and that the two sides of the clip do not come into contact while tightening, as this will prevent the strap from being correctly tensioned.

Picture 10: Sensor mounting with tension straps

Picture 11: Metallic mounting straps

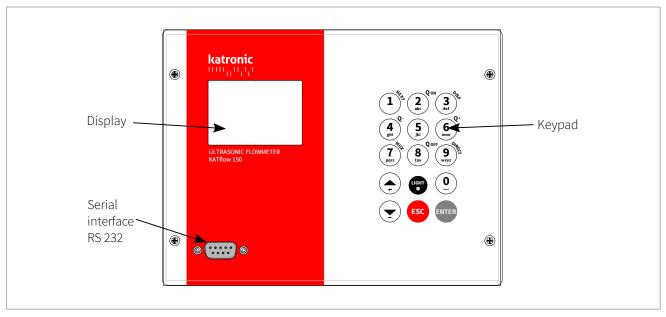

# **OPERATION**

### 4 OPERATION

# 4.1 Switching On/Off

The flowmeter is switched on by connecting the power supply to the instrument. Disconnecting the external supply switches the flowmeter off.

# 4.2 Keypad and display

Picture 12: Keypad and display KATflow 150

Customer-specific settings for data to be displayed can be achieved by using the appropriate menu items.

### 4.3 Quick Setup Wizard

The Quick Setup Wizard allows for a speedy setup of the most important parameters in order to achieve successful measurements in the shortest possible time:

Used keys	Display screen	Operation
ENTER	MAIN MENU  Quick start  Installation  Output  System	At first power on and the boot sequence, the "Main Menu" is displayed. Use the UP ▲ and DOWN ▼ cursor keys to select "Quick Start" and confirm by pressing ENTER.
	QUICK START MENU Setup Wizard Single Setup Wizard Dual Start Measurement	Use cursor keys to select "Setup Wizard". Confirm by pressing ENTER. If the sensors are recognised, the serial number will be shown. If not, the type can be selected.
	MIDDLE UNITS  m3/h m3/m m3/s	Select the main measurement unit using the cursor keys and confirm with ENTER. This unit will be displayed in the middle of the measurement screen. Selecting OFF deactivates the measurement channel.
	PIPE MATERIAL  Stainless Steel  Carbon Steel  Ductile cast iron	Select pipe material using the cursor keys and confirm with <b>ENTER</b> .
•	OUTSIDE DIAMETER 76.1	Enter the outer pipe diameter using the alphanumeric keys and confirm with ENTER. Use UP ▲ key as backspace to correct for entry errors.  If 0 is entered and confirmed, an additional screen appears that allows entry of the circumference.
	103.0	Enter the circumference using the alphanumeric keys. Press <b>ENTER</b> to confirm.
( <del>c</del> )	WALL THICKNESS  3.4	Enter pipe wall thickness using the alphanumeric keys and confirm with ENTER. Use UP ▲ key as a backspace to correct for entry errors.

# OPERATION

Used keys	Display screen	Operation
	INNER DIAMETE	Enter the inner pipe diameter using the alphanumeric keys and confirm by pressing ENTER.  The value that appears here will have been calculated from the entered outside diameter (or circumference) and wall thickness. Entering a new value will recalculate the outside diameter.
	FLUID Water Saltwater Acetone	Select the fluid using cursor keys. Confirm by pressing ENTER.
<u></u>	TEMPERATURE 20.0	Enter the fluid temperature using the keypad. Confirm by pressing ENTER. Use UP ▲ key as a backspace to correct for entry errors.
	Pubbon	Select pipe liner material using cursor keys and confirm by pressing ENTER.  If a liner material is chosen, an additional screen appears that allows entry of liner thickness.
•	PASSES Auto 1 2	Select number of sound passes (sound paths) using cursor keys.  Auto: Automatically  1: 1 pass (Diagonal Mode)  2: 2 passes (Reflection Mode)  3: 3 passes (Diagonal Mode)  4: 4 passes (Reflection Mode) etc.  Confirm with ENTER.
	<b>QUICK START MEN</b> Setup Wizard Single Setup Wizard Dual Start Measurement	Select "Start Measurement" and confirm with ENTER to start the sensor positioning procedure.
	CHNL1 SENSOR Spacing 110.5 mm Using 2 passes Signal 26 dB	Sensor positioning screen: Mount transducers with suggested spacing and use middle bar for fine adjustment of position (central position is desired). Observe signal-to-noise (upper bar) and quality (lower bar). These should be of identical length. Confirm by pressing ENTER to obtain measurements.  Note: Numbers shown are for indication only.
	CHNL-1 25.678	Success!
	11/11/07 10:56:0	00

Table 10: Quick Setup Wizard

### 4.4 Measurement

### 4.4.1 Main process value display

Measurement is started using "Start Measurement" in the Quick Start Wizard. If all parameters have been entered, the next time the flowmeter is switched on the main process value (PV) is immediately shown on the display and/or made available as an output signal (if installed and operating).

The main process value (PV) is the primary measurement data and is usually displayed as the middle unit. User-specific settings for the main process value display can be made using the corresponding options in the menu. The process value can be selected from a list of available values.

Used keys	Display screen	Operation
1 To the second	FLOW RATE 25.678 m3/h 11/11/07 10:56:00	The main process value can be changed in the "Quick Start" or "Installation" menus.  Press ESC at any time to return to the "Main Menu". View totalisers by pressing NEXT.  Change to the diagnostic displays by pressing DISP.

Table 11: Main process value display

### 4.4.2 Three-line display

Used keys	Display screen	Operation
3 co	FLOW Pump P3A <b>25.678 m3/h</b> 1.370 m/s 11/11/07 10	The three-line display screen is configurable to show flow, totalisers and diagnostic functions.  Change to diagnostic displays by pressing DISP and to totaliser screens by pressing NEXT.  Cycle through display screens using DISP.  Cycle through available flow channels using MUX.

Table 12: Main process value display in three-line display format

### 4.4.3 Diagnostic display

Used keys	Display screen	Operation
1	<b>DIAGNOSTIC 1</b> 55.2 Gain <b>20.5 Signal</b> -10.0 <b>N</b> oise 11/11/07 10:56:00	Line 1 shows the amplifier gain. Line 2 displays the signal strength. Line 3 indicates the noise. Change to more diagnostic displays by pressing NEXT. Refer to Customer Support for the meanings of each diagnostic screen.

Table 13: Diagnostic display

# **OPERATION**

Diagnostic displays can be viewed directly during measurement. Other diagnostic functions are available in the menu structure.

### 4.4.4 Totaliser

The totaliser displays will only be shown when the totalisers are activated.

Used keys	Display screen	Operation
1 QON QON abc	<b>TOTALISER - 1</b> - 1.3 m3 <b>25.678 m3/h</b> 37.3 m3 11/11/07 10:56:00	The flow totaliser can be started or reset by pressing $Q_{ON}$ when a volume measurement is selected as one of the displayed units. Totaliser screens are viewed by pressing NEXT from the measurement screen. When top and bottom display lines are set to a volume measurement, the first totaliser screen displays cumulative totals and the second screen shows separate positive and negative totals. Pressing NEXT again will return to the main measurement screen.
6 mno 4 ghi		Pressing Q <sub>+</sub> resets the total accumulated flow in the positive flow direction.  Pressing Q <sub>-</sub> resets the total accumulated flow in the negative flow direction.
8 QOFF		The totalisers can be stopped by pressing $Q_{\text{OFF}}$ .
(3) def		Pressing $Q_{\text{ON}}$ again will reset to zero. Change to other displays or revert to the totaliser screen without resetting by pressing DISP or NEXT.

Table 14: Totaliser display

### 4.4.5 Dual-channel measurement screen

Used keys	Display screen	Operation
They	<b>DUAL-1</b> 37.3 <b>m3/h</b> 1.370 11/11/07 10:56:00	Line 1 shows the PV on the selected channel. Line 2 shows the selected units. Line 3 shows the PV on the other channel (in its selected units) Change to diagnostic displays by pressing DISP and to totaliser and main PV screens by pressing NEXT. Cycle through available flow channels using MUX.

Table 15: Dual-channel measurement screen

### 4.4.6 "Math" display

Used keys	Display screen	Operation
3 def 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	<b>MATH-1 27.678</b> AVE m3/h 11/11/07 10:56:00	Displays the "Math" function (when enabled on multi-channel meters). "Sum", "Difference", "Average" and "Maximum" can be selected in the "Calculation" menu. "Average" shown in illustration. Change to diagnostic displays by pressing DISP and to totaliser, dual and main PV screens by pressing NEXT.

Table 16: "Math" display

### 4.4.7 Data logger

- The data logger is enabled from the "Main Menu" and operates when a non-zero value is entered for the interval.
- Items to be logged are selected from the "Selection" screen. ENTER selects items, 0 deselects.
- Up to ten items may be selected.

- If no items are selected the logger will record blank space.
- Send logger by serial port to a terminal program by selecting "Log Download".
- Clear the logger by selecting "Log Erase".
- Remaining logger space can be seen in the diagnostic displays.
- Logged data can be downloaded, viewed and exported using the KATdata+ software except when "Wrap Mode" has been enabled.

		Туре	Select from list ↑↓ RS 232, RS 485 etc. (as installed)
Scope			Hidden option that can be selected by pressing <b>5</b> in the main menu
			Shows the received acoustic pulse and further data to evaluate the signal quality as an oscilloscope function on channel 1 only (see Section 5.8)

Table 17: Menu structure KATflow 150

## **COMMISSIONING**

## 5.2 Output configuration

The assignment of slots is detected by the flowmeter, and will be as shown in the "In/Output" menu. The following picture shows an example assignment with a passive current input on slot 1 (line 1) and an active current output on slot 2 (line 2).

Picture 14: Display example passive current input

#### 5.2.1 Serial interface

The RS 232 serial interface can be used to transmit data online, to download the integral data logger content or to communicate with peripheral equipment. The settings can be found in the "Serial Communication" submenu.

#### 5.2.2 Modbus RTU

The interface is used for networking up to 32 flowmeters to a centralised computer system. Each flowmeter is given an unique address to be able to communicate effectively. The communication protocol used conforms to the conventions of the Modbus RTU protocol, a description of which is given in a separate document. Please refer to Customer Support for further information.

In addition, the ASCII printer output can also directed through the RS 485 interface (where installed) instead of the RS 232 to increase the transmission distance.

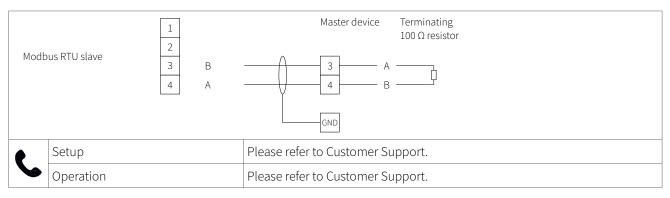

Table 18: Wiring Modbus RTU

#### 5.2.3 HART® compatible output

The KATflow 150 can also be configured with an optional module which responds to output commands conforming to the HART® protocol. Please refer to Customer Support for further information.

HART® is a registered trademark of the HART Communication Foundation.

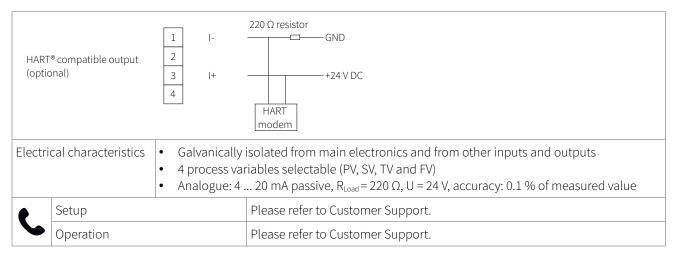

Table 19: Wiring HART® compatible output

#### 5.2.4 Analogue current output 0/4 ... 20 mA

The analogue current outputs operate in a 4 ... 20 mA or 0 ... 20 mA span.

Current outputs may be assigned to process values in the "Mode" section of the output menu. The outputs can be programmed and scaled within the menu structure.

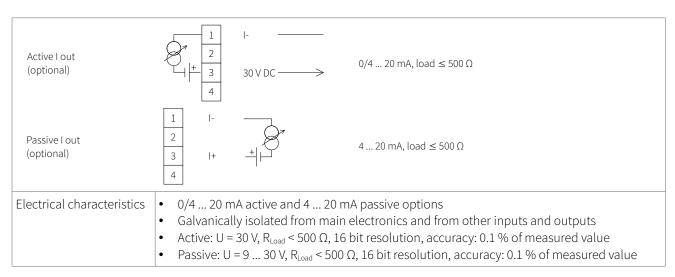

Table 20: Wiring analogue current output 0/4 ... 20 mA

#### **COMMISSIONING**

#### 5.2.5 Analogue voltage output 0 ... 10 V

Voltage outputs may be assigned to process values in the "Mode" section of the output menu. The outputs can be programmed and scaled within the menu structure.

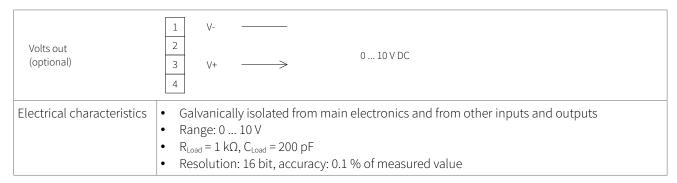

Table 21: Wiring analogue voltage output 0 ... 10 V

#### 5.2.6 Analogue frequency output (passive)

Frequency outputs may be assigned to process values in the "Mode" section of the output menu. The outputs can be programmed and scaled within the menu structure.

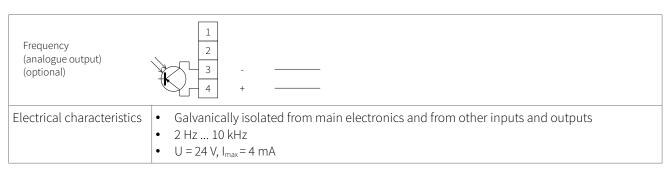

Table 22: Wiring analogue frequency output (passive)

#### 5.2.7 Digital open-collector output

Open-collector outputs may be assigned to process values in the "Mode" section of the output menu. The outputs are configured using the menu structure.

The totaliser function is enabled and controlled using the menu structure.

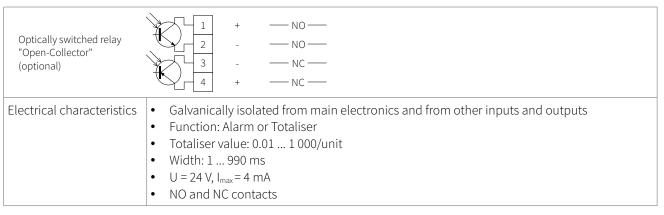

Table 23: Wiring digital open-collector output

## 5.2.8 Digital relay output

Relay outputs may be assigned to process values in the "Mode" section of the output menu. The relay outputs are configured using the menu structure.

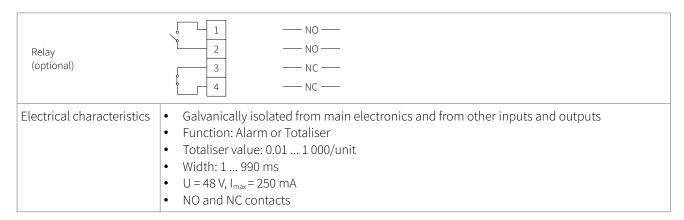

Table 24: Wiring digital relay output

## **COMMISSIONING**

## 5.3 Input configuration

#### 5.3.1 Pt 100 inputs

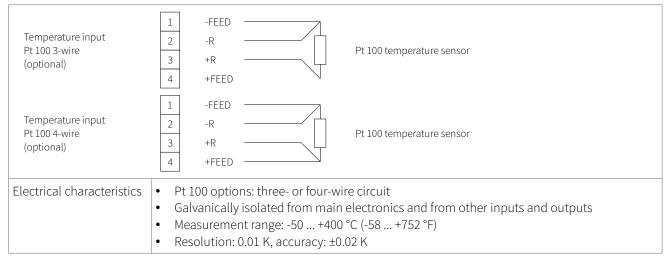

Table 25: Wiring Pt 100 inputs

## 5.3.2 Analogue current input 0/4 ... 20 mA

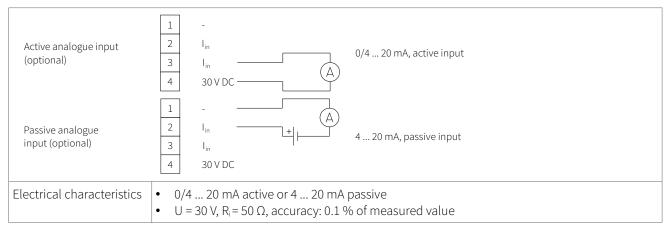

Table 26: Wiring analogue current input 0/4 ... 20 mA

## 5.4 Temperature compensation

With temperature compensation enabled the temperature dependency of the medium in relation to speed of sound, viscosity and density calculations will be compensated. The "In/Output" menu will then allow the user to select the temperature input source, either Pt 100 temperature sensors or via a 0/4 ... 20 mA input channel.

#### 5.5 Heat quantity measurement

Where equipped, heat quantity (energy) and heat flow (energy flow) can be measured. If a heat quantity unit is specified for the process value, the KATflow 150 will ask the user for the specific heat capacity of the medium in J/g/K (for example 4.186 J/g/K for water).

The output options menu for the Pt 100 will allow the user to select the temperature input source; either Pt 100 temperature sensors or a fixed value for measurement against a known inlet or outlet temperature. Where Pt 100 sensors are selected, the Wizard will prompt the user for a temperature offset, which may be useful where the temperature of the medium differs from the temperature of the pipe wall (for example with unlagged pipes). If a fixed value is selected, the user will be asked to specify this value.

When heat quantity units are selected, these behave as any other process value and may be totalised, logged, or applied to a process output.

#### 5.6 Sound velocity measurement

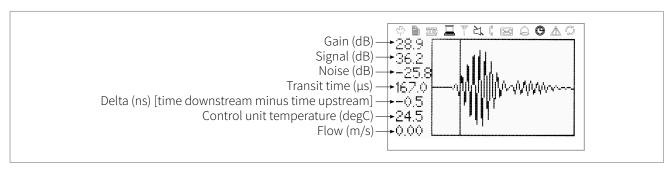

The measured speed of sound (SOS) is available as a diagnostic function during measurement and may be applied to a process output by selecting "C" from the appropriate output menu.

#### 5.7 Dual-channel flow calculations

Where suitably equipped, dual-channel calculations are available from the System - Calculation - Math menu. These allow the user to select the Sum, Difference, Average (mean) or Maximum of the two flow channels. This value may be displayed or applied to a process output by selecting "Math" from the appropriate output menu.

#### 5.8 Scope function

Katronic flowmeters have an additional scope function which shows a representation of the pulse received by the sensors on channel 1. In addition to displaying the received pulse, this screen lists the data given from top to bottom (Picture 15).

Picture 15: Scope function display

# COMMISSIONING

## 5.9 KATdata+ software

Software can be provided for downloading the contents of the data logger and communication with the flowmeter.

#### 6 MAINTENANCE

KATflow flowmeters are maintenance free concerning the flow measurement functions. Within the scope of periodic inspections, regular inspection for signs of damage or corrosion is recommended for the transducers, the junction box (if installed) and the flowmeter housing.

#### 6.1 Service/Repair

KATflow flowmeters have been carefully manufactured and tested. If installed and operated in accordance with the operating instructions, no problems are usually experienced.

Should you nevertheless need to return a device for inspection or repair, please pay attention to the following points:

- Due to statutory regulations on environmental protection and safeguarding the health and safety of our personnel, the manufacturer may only handle, test and repair returned devices that have been in contact with products without risk to personnel and environment.
- This means that the manufacturer can only service this device if it is accompanied by a Customer Return Note (CRN) confirming that the device is safe to handle.

If the device has been operated with toxic, caustic, flammable or water-endangering products, you are kindly requested:

- To check and ensure, if necessary by rinsing or neutralising, that all cavities are free from such dangerous substances.
- to enclose a certificate with the device confirming that is safe to handle and stating the product used.

## **TROUBLESHOOTING**

#### 7 TROUBLESHOOTING

## 7.1 Measurement difficulties and error messages

Most problems with measurement are due to poor signal strength or quality. Initial checks should include:

- Has sufficient acoustic coupling paste been applied?
- Can the number of sound passes be changed? As a general rule, more passes will improve accuracy, fewer passes will give better signal strength.
- Are there any nearby sources of noise or disturbance?
- Can the signal be improved by moving the sensors around the circumference of the pipe?
- Are the application parameters correct?

Should there be the need to call Customer Service, please let us know the following details:

Model code,

- Serial number,
- SW, HW revision,
- Error log list.

Possible error messages may include the following:

Error message	Group	Description	Error handling	
USB INIT FAIL	Hardware	Internal board communication error	Power on/off, otherwise call Customer Support	
NO SERIAL NO.	Hardware	Failed to read from FRAM	Call Customer Support

# TROUBLESHOOTING

## 7.2 Data download difficulties

If difficulties are encountered downloading the logger data:

- Check that the flowmeter is switched on and not in measurement mode.
- Check that the same number COM port is allocated in the "Device Manager" (or equivalent) as is set in the KATdata+ software.
- Check that the settings (baud, parity, word length, stop bits) are identical.
- Use the supplied connectors whether connecting to a 9-pin COM port or converting from serial communication to a Universal Serial Bus (USB).
- Is the logger in "Wrap Mode"? If "yes", use a terminal program and the "Log Download" command. If "no", the KATdata+ software may also be used.

## 8 TECHNICAL DATA

## 8.1 Sound speed of selected pipe materials

Table 30: Temperature and sound speed in water

# SPECIFICATION

## 9 SPECIFICATION

## 9.1 General

Measuring principle	Ultrasonic time difference correlation principle
Flow velocity range	0.01 25 m/s
Resolution	0.25 mm/s
Repeatability	0.15 % of measured value, ± 0.015 m/s
Accuracy	Volume flow: ± 1 3 % of measured value depending on application ± 0.5 % of measured value with process calibration Flow velocity (mean): ± 0.5 % of measured value
Turn down ratio	1/100
Gaseous and solid content of liquid media	< 10 % of volume

## 9.2 Flowmeter

Enclosure type	Wall mounted housing
Degree of protection	IP 66 according EN 60529
Operating temperature	-10 +60 °C (+14 +140 °F)
Housing material	Polycarbonate
Measurement channels	1 or 2
Power supply	100 240 V AC 50/60 Hz, 9 36 V DC, special versions on request
Display	LCD graphic display, 128 x 64 dots, backlit
Dimensions	237 (h) x 258 (w) x 146 (d) mm (without cable glands)
Weight	Approx. 2.3 kg
Power consumption	< 10 W
Signal damping	0 99 s
Transit time measurement rate	100 Hz (standard)
Output update time	1 s, faster rates on application
Calculation functions	Average/difference/sum/maximum (dual-channel use only)
Operating languages	Czech, Dutch, English, French, German, Italian, Romanian, Russian, Spanish, Turkish (others on request)

## 9.3 Quantity and units of measurement

Volumetric flow rate	m³/h, m³/min, m³/s, l/h, l/min, l/s USgal/h (US gallons per hour), USgal/min, USgal/s bbl/d (barrels per day), bbl/h, bbl/min, bbl/s
Flow velocity	m/s, ft/s, inch/s
Mass flow rate	g/s, t/h, kg/h, kg/min
Volume	m³, I, gal (US gallons), bbl
Mass	g, kg, t
Heat flow	W, kW, MW (only with heat quantity measurement option)
Heat quantity	J, kJ, MJ (only with heat quantity measurement option)
Temperature	$T_{in}$ , $T_{out}$ , CU (housing temperature) in $^{\circ}$ C
Speed of sound	C in m/s
Signal quality	Sig in dB (signal), noise in dB, SNR (signal to noise ratio)

# 9.4 Internal data logger

Storage capacity	In excess of one million data points (16 MB)
Logging data	All measured and totalised values, parameter sets

## 9.5 Communication

Serial interface	RS 232, USB cable (optional), RS 485 (optional), Modbus RTU (optional), HART* compatible output (optional), Profibus PA (optional)
Data	Instantaneous measured value, parameter set and configuration, logged data

## 9.6 KATdata+ software

Functionality	Download of measured values/parameter sets, graphical presentation, list format, export to third party software, online transfer of measured data
Operating systems	Windows 10, 8, 7, Vista, XP, NT, 2000, Linux, Mac (optional)

## **SPECIFICATION**

## 9.7 Process inputs

A maximum of ten input and output slots can be used.

All process outputs are galvanically isolated from the device electronics and from other inputs/outputs.

Temperature	Pt 100, three- or four-wire circuit Measurement range: -50 +400 °C (-58 +752 °F)	
	Resolution: 0.01 K, accuracy: ±0.02 K	
Current	$0/4$ 20 mA active or 4 20 mA passive, U = 30 V, $R_i$ = 50 $\Omega$ , accuracy: 0.1 % of measured value	

Further process inputs available on application.

## 9.8 Process outputs

A maximum of ten input and output slots can be used.

All process outputs are galvanically isolated from the device electronics and from other inputs/outputs.

Current	$0/4$ $20$ mA active and $4$ $20$ mA passive options Active: U = $30$ V, $R_{Load} < 500$ $\Omega$ , $16$ bit resolution, accuracy: $0.1$ % of measured value Passive: U = $9$ $30$ V, $R_{Load} < 500$ $\Omega$ , $16$ bit resolution, accuracy: $0.1$ % of measured value
Voltage	Range: 0 10 V, $R_{Load}$ = 1 k $\Omega$ , $C_{Load}$ = 200 pF, resolution: 16 bit, accuracy: 0.1 % of measured value
Digital optical open-collector	Function: Alarm or Totaliser Totaliser value: $0.01 \dots 1000/\text{unit}$ , width: $1 \dots 990 \text{ ms}$ , $U = 24 \text{ V}$ , $I_{\text{max}} = 4 \text{ mA}$ , NO and NC contacts
Digital relay	Function: Alarm or Totaliser Totaliser value: 0.01 1 000/unit, width: 1 990 ms, U = 48 V, I <sub>max</sub> = 250 mA, NO and NC contacts
Analogue frequency (passive)	2 Hz 10 kHz, U = 24 V, I <sub>max</sub> = 4 mA
HART®	HART-compatible output: 4 process variables selectable (PV, SV, TV and FV) Analogue: 4 20 mA passive, $R_{Load}$ = 220 $\Omega$ , U = 24 V, accuracy: 0.1 % of measured value

Further process outputs available on application.

## 9.9 Sensors: K1L, K1N, K1E

Sensor type	K1L	K1N	K1E
Pipe diameter range	50 6 500 mm	50 3 000 mm	50 3 000 mm
Temperature range			-30 +250 °C (-22 +482 °F) (for short periods up to +300 °C (+572 °F))
Material of cable conduits	PVC Stainless steel Stainless steel		Stainless steel
Standard cable lengths	5.0 m 4.0 m 4.0 m		4.0 m
Dimensions of sensor heads	60 (h) x 30 (w) x 34 (d) mm		
Material of sensor heads	Stainless steel		
Degree of protection	IP 66 according to EN 60529 (IP 67 and IP 68 on request)		

## 9.10 Sensors: K4L, K4N, K4E

Sensor type	K4L	K4N	K4E
Pipe diameter range	10 250 mm	10 250 mm	10 250 mm
Temperature range	-30 +80 °C (-22 +176 °F)   -30 +130 °C (-22 +266 °F)   -30 +250 °C (-22 +48 (for short periods up to +300 °C (+572 °F))		1
Material of cable conduits	PVC Stainless steel Stainless steel		Stainless steel
Standard cable lengths	5.0 m 2.5 m 2.5 m		2.5 m
Dimensions of sensor heads	43 (h) x 18 (w) x 22 (d) mm		
Material of sensor heads	Stainless steel		
Degree of protection	IP 66 according to EN 60529 (IP 67 and IP 68 on request)		

# SPECIFICATION

## 9.11 Sensors: K1Ex, K4Ex

The sensors are suitable for use in hazardous areas classified as Zone 1 and 2. The flowmeter unit must be placed in a safe area or suitable enclosure.

Sensor type	K1Ex	K4Ex	
Pipe diameter range	50 3 000 mm	10 250 mm	
Manufacturer	Katronic Tech	nnologies Ltd.	
	Earls	Court	
	13 Warw	ick Street	
	Coventry	/ CV5 6ET	
	United P	Kingdom	
Ex-certification code	Gas groups: II 2G Ex mb II T6 - T4 X Dust groups: II 2D Ex mbD 21 IP 68 T80 °C - T120 °C X		
Ex-certification number	TRAC 09 ATEX 21226X		
Degree of protection	IP 68 according to EN 60529		
Ex-protection method	Encapsulation (m), high level of protection (b)		
Temperature range	Temperature class T4: -50 +115 °C		
	Temperature class T5: -50 +90 °C		
	Temperature class T6: -50 +75 °C		
Dimensions of sensor heads	60 (h) x 30 (w) x 34 (d) mm		
Material of sensor heads	Stainless steel		
Material of cable conduits	PTFE		
Standard cable lengths	5.0 m		

## 10 INDEX

Acoustic coupling gel	19	Negative separation distance	13
Analogue current input	34, 42	Outer pipe diameter	25
Analogue current output	32, 39	Output configuration	38

#### 11 APPENDIX A – CERTIFICATE OF CONFORMITY

## **Declaration of Conformity**

We, Katronic Technologies Ltd., declare under our sole responsibility that the product listed below to which this declaration relates are in conformity with the EU directives:

- EMC Directive 2014/30/EU for Electromagnetic Compatibility
- Low Voltage Directive 2014/35/EU for Electrical Safety

Name of Products	Description	
KATflow 100, 150, 200, 210 and 230	Ultrasonic flowmeter with associated Katronic transducers	

The mentioned products are in conformity with the following European Standards:

Class	Standard	Description
EMC Directive	BS EN 61326-1:2013	Electrical equipment for measurement, control and laboratory use – EMC requirements
Immunity	BS EN 61326-1:2013 BS EN 61000-4-2:2009 BS EN 61000-4-3+A2:2006 BS EN 61000-4-4:2012 BS EN 61000-4-5+A1:2014 BS EN 61000-4-6:2014 BS EN 61000-4-11+A1:2004	Electrical equipment for continuous unattended use Electrostatic discharge RF field Electric fast transient/burst Surge RF conducted AC mains voltage dips and interruption
Emission	BS EN 61326-1:2013 BS EN 55022:2010	Electrical equipment Class B Disturbance voltage Class B
Low Voltage Directive	BS EN 61010-1:2010	Safety requirements for electrical equipment for measurement, control and laboratory use

Coventry, 1 November 2019

For and on behalf of Katronic Technologies Ltd.

Yours sincerely,

Andrew Sutton
